

Accessibility Pro

Imagine empowering your website to intuitively and automatically comply with accessibility standards ... no matter where your visitors are located.

ResMan Accessibility Pro is an AI-assisted accessibility tool that uses machine learning to scan, analyze and modify your site's code and behavior for each so it complies with domestic and international legislation.

Features

Screen-Reader and Keyboard Navigation

AI analyzes your website visually by matching its elements and behaviors to millions of other encounters it has had to provide context and instruction for sight-impaired visitors.

Image Recognition and OCR

AI applies that same "thinking" process to enable visitors to accurately "hear" your website with OCR, or text recognition, which translates printed, typed or handwritten texts into audio files. It can label images by tagging or identifying the main object of an image for those with low vision.

24/7 Compliance with Daily Scans and Analysis

AI re-scans every page of every site at a minimum rate of once every 24 hours, ensuring instant compliance updates.

Accessibility Pro vs. The Competition

There is no comparison

Accessibility Pro is the only AI-powered, automatic and integrated solution in the industry today that is proven to make websites fully WCAG- and ADA-compliant and beat legal cases.

	ResMan Accessibility Pro	Accessibility Services	Accessibility Plugins
Options	The Only automatic, integrated Solution	AudioEye, User1st	UserWay, WP access
